

Your Free AI Assistant — Quick-Start Guide

Muse is the AI assistant I use every day — it runs my business pages, writes my emails, and does my research. Here's how to get yours set up in five minutes.

Step 1 — Get the app

Download Muse and join here: <https://muse.ai/join>

Then open the app's **Settings** within 48 hours of joining and enter my referral code for bonus tokens:

RDB2F0

Step 2 — Ask it these three things first

1. **"Plan my day from these details:"** — paste in your schedule, appointments, or to-do list. It maps the whole day out for you. (It planned my entire first day of school.)
2. **"Turn these documents into a single checklist:"** — drop in orientation packets, manuals, anything messy. It pulls every action item into one clean list.
3. **"Walk me through fixing this, step by step:"** — describe the problem as it happens. It troubleshoots live with you. (It fixed my class camera issue in real time.)

Pro tip: the more context you give it, the better it performs. Paste the details, upload the files, describe the situation — then let it work.
